INTRODUCTION

Uber has taken, copied, and used Waymo's technology. This, along with Uber's subsequent cover-up and violations of this Court's orders, shows the need for an injunction in this case. The evidence shows that Uber met with Anthony Levandowski to recruit him away from Waymo at the same time Levandowski was telling co-workers he planned to "replicate" Waymo's technology at a new company. Uber enticed Levandowski to copy Waymo's technology for Uber's competing self-driving car program, ultimately purchasing Levandowski's months-old start up for \$680 million, even though it had no other viable technology to speak of. We now know those acquisition talks started just two days after Levandowski left Waymo, and probably even before that. By admission of Uber's own engineers in deposition, the evidence also now confirms that Uber used Waymo's intellectual property to develop LiDAR devices for self-driving cars, in spite of Uber's attempts to mislead this Court otherwise.

Attempting to hide its unlawful conduct, Uber has blocked and obfuscated in response to this Court's discovery orders. Uber – claiming a "common interest" with Levandowski and his start-up - has wrongly relied on the Fifth Amendment to block production of documents and testimony relating to its theft. And Uber has hidden over 3000 relevant documents from Waymo claiming "privilege" without disclosing even the basic information required by this Court for a privilege log. What little information is provided in these logs, however, shows that within two days of Levandowski's departure from Waymo, Uber was already "anticipating" litigation over its planned "acquisition" of Levandowski's new company.

In its Opposition, Uber misrepresents its LiDAR design efforts to this Court. Uber claims that, unlike Waymo's single-lens LiDAR design, Uber's LiDAR is a "four-lens design" called Fuji. Through discovery, we know this too is a cover up. As this Court observed on April 12 (Ex. 1 89 at 90:4-18.), Uber's Opposition is silent on Uber's work before October 2016. Only days before filing this Reply, however, Waymo finally learned through cross examination of Uber's engineers that Uber code named Levandowski, while in

[&]quot;Ex." refers to exhibits attached to the Declaration of Jordan Jaffe, filed concurrently herewith.

possession of 14,000+ Waymo's proprietary documents, designed himself. So it is no surprise that it is a copy of Waymo's design, infringes Waymo's patents, and copies Waymo's trade secrets.

In addition to omitting mention of the problem, Uber misled the Court to hide it. Waymo made a motion to inspect pre-Fuji LiDAR designs, based on Uber's sworn certification made in a Nevada regulatory submission that a pre-Fuji design existed. The Court asked why Waymo could not inspect the device described in the submission. Counsel for Uber responded: "Because, Your Honor, we showed it to them yesterday. It's the Fuji." (Ex. 89 (4/12/17 Hr'g) at 88:2-3.) As Waymo now knows, it is not the Fuji. The regulatory filing describes design. Counsel for Uber continued: "We're not hiding some device, Your Honor. We've got two devices basically and we showed both of them to them yesterday." (Id. at 89:21-22.) Again, false. They were hiding a device, which Uber only revealed to Waymo after one of its engineers was forced to admit it existed in a deposition subsequent to that Court hearing.

Aside from its affirmative efforts to mislead the Court, Uber's opposition is silent on fundamental aspects of the evidentiary record presented by Waymo. Uber does not dispute that Levandowski, the head of its self-driving car program, downloaded 14,000+ confidential files from Waymo's design server, transferred those files to a USB drive, and then wiped his laptop to try to cover his tracks. Nor does Uber dispute that 2 GBs of that stolen data relate to Waymo's LiDAR technology or that the stolen data includes the confidential specifications for each generation of Waymo's LiDAR circuit boards.² Uber has not proffered a declaration from Levandowski to rebut or explain these facts. Instead, Levandowski has asserted the Fifth Amendment right against self incrimination. Elsewhere, however, he has essentially admitted these facts. (Ex. 64 (Pennecot) 65:18-20

Ex. 82 (Gruver) 60:16-19

² Uber erroneously contends that Waymo "admits that four-fifths of this download were not

trade-secrets" (Opp. 10 (citing Janosko Decl. ¶¶ 23-24).) In fact, Janosko simply stated that 2 out of 9.7 GBs of the confidential and proprietary internal Waymo information that Levandowski downloaded *relate to LiDAR*. (Janosko Decl. ¶¶ 23-24.)

In addition to the design, discovery has shown that Uber used Waymo trade secrets in its later Fuji design. Uber does not dispute that the drawing attached to the email entitled "OTTO FILES" that Waymo received from its LiDAR component vendor on December 13, 2016 (Dkt. 25-45) is, in fact, a circuit board used by Uber in connection with developing Fuji. And Uber does not dispute that, at its direction, Levandowski has been involved in the development of Uber's LiDAR system from at least February 2016 (before Uber even acquired his company) to the present. Levandowski refutes none of this – he took the Fifth on these subjects too. (*E.g.*, Ex. 66 (Levandowski) 20:9-24, 100:9-101:15, 115:3-16.)

This is an exceptional case. It calls for exceptional relief. As described more fully below, Waymo is likely to succeed on its claims, and adverse inferences further support an injunction to avoid irreparable harm caused by Uber's conduct. To this day, Levandowski remains heavily involved in Uber's LiDAR development. Uber should be enjoined from continuing to use Levandowski in its driverless car program and from continuing to misappropriate and infringe Waymo's intellectual property.

I. WAYMO WILL PREVAIL ON ITS CLAIMS

A. Trade Secrets 1 and 4: |

Uber does not dispute that its Fuji LiDAR device uses Trade Secrets 1 and 4. (Opp. 10-12; Kintz Reply Decl. ¶¶ 5-6.) The expert Uber tasked with analyzing those trade secrets did not dispute that Uber's transmit boards use the trade secrets (McManamon Decl. ¶¶ 23, 50), and he admitted that he never compared Uber's transmit PCBs to Waymo's trade secret design. (Ex. 83 (McManamon) 33:17-34:13.)

Instead, Uber argues that it independently developed Fuji, including its transmit boards. (Opp. 11-12.) But there is no credible evidence to support this theory. (Kintz Reply Decl. ¶ 16-23.) Uber has offered no explanation for how Fuji, which Uber "started developing" in "late October 2016" (Haslim Decl. ¶ 5), ended up with transmit boards nearly identical to those in Waymo's (Ex. 65 (Linaval) 52:18-23, 53:18-23) so quickly. Uber's expert admits that

1	developing the transmit portion of a LiDAR device is a multifaceted and involved process, but he		
2	is notably silent about how long the design process might take or whether it is remotely realistic		
3	for Uber to have developed the Fuji boards – without a jump start – in less than two months. (Ex.		
4	83 (McManamon) 69:16-71:23.) Although Uber contends that Fuji is "based on the		
5	that Scott Boehmke developed" (Opp. 11), Uber offers no analysis to link		
6	Boehmke's work to the Fuji device: Uber's expert admitted . (Ex.		
7	83 (McManamon) 46:22-47:4.) Uber also misleadingly omits that it was <i>Levandowski</i> who		
8	provided direction to Boehmke for Uber's . (E.g., Exs. 76-77.)		
9	Levandowski's involvement ³ firmly establishes that any development was not "independent."		
10	Uber argues that Waymo's cannot be a trade secret because it was		
11	supposedly disclosed in two public sources: the PanDAR paper and Velodyne's '190 Patent.		
12	(Opp. 11-12; McManamon Decl. ¶¶ 51-59.) But Uber's expert has now admitted that the PanDAR		
13	paper did not disclose at all. (Ex. 83 (McManamon) 56:11-58:14.) With respect		
14	to the '190 Patent, Uber cites a single line that says "[t]he density of emitter/detector pairs		
15	populated along the vertical FOV [field of view] is intentionally variable ." (Opp. 11 (Uber's		
16	emphasis).) Yet the remainder of the paragraph makes clear that the '190 Patent does not		
17	contemplate , much less		
18	. Instead, the '190 Patent simply		
19	contemplates that different LiDAR systems could have different overall numbers of diodes. ('190		
20	Patent 6:52-56.) Indeed, Uber's expert admitted that the '190 Patent does not teach any		
21	. (Ex. 83 (McManamon) 61:9-62:5.) He conceded that		
22			
23	. (Id. 60:8-62:25.)		
24	On this record alone, Waymo has established its likelihood of success. But the record is		
25	buttressed even further by the adverse inferences that flow from Levandowski pleading the Fifth in		
26			
27	³ See generally Ex. 64 (Pennecot) 42:15-45:10, 71:10-72:5; Ex. 65 (Linaval) 35:13-14; Ex. 67 (Boehmke) 12:1-4, 16:18-17:3, 20:11-16; Ex. 68 (Haslim) 93:24-94:24; Ex. 82 (Gruver) 24:4-14		
28	24:25-25:5, 31:18-32:4, 39:6-9, 67:2-10; Exs. 69-78, 104, 111.		

01980-00104/9210217.1

1 response to every question regarding Trade Secrets 1 and 4. (Ex. 66 (Levandowski) 136:7-142:2.) 2 В. Trade Secret 7: 3 Uber does not dispute that it in its custom LiDAR systems in exactly the same way and by exactly the same amount – to the micron – that Waymo 5 in its current-generation LiDAR system. (Ex. 68 (Haslim) 62:8-20, 64:4-9; Ex. 64 6 (Pennecot) 21:12-17; Ex. 84 (Lebby) 58:14-23.) Uber does not contend that it independently 7 arrived at the design decision to or that it independently derived 8 (Ex. 84 (Lebby) at 75:4-76:16.) Uber does not dispute that Waymo 9 has maintained the confidentiality of its design, that typical LiDAR systems 10 (including prior generation Waymo systems) utilize 11 that Waymo's LiDAR system is the only one (besides Uber's) that 12 or any other amount. (Kintz Reply Decl. ¶¶ 40-45.) 13 Instead, Uber contends only that a LiDAR system with 14 cannot be a trade secret because a textbook and a German doctoral thesis 15 purportedly reveal that is a possible "design choice." (Opp. 16 14.) But the cited page of the textbook actually states that is a *problem* to be *avoided* – 17 explaining that and results in 18 "ineffective heat conduction." (Dkt. 182-4 at 224.) The cited thesis does not address LiDAR at all 19 (Dkt. 182-5 at 3) and, like the textbook, states that is generally undesirable (*id.* at 28). 20 Nothing in the two references cited by Uber suggests that Waymo's use of a 21 in its current generation LiDAR system is a "general engineering principle in the public domain" 22 or otherwise calls into question Waymo's showing that its is a Waymo 23 secret that has economic value because of its secrecy. (Kintz Reply Decl. ¶¶ 42-45.) An adverse 24 interest of misappropriation is also appropriate given Levandowski's pleading the Fifth in 25 response to every question on Trade Secret 7. (Ex. 66 (Levandowski) 146:1-147:2, 147:25-149:7.) 26 C. Trade Secrets 2 and 3: 27 Uber does not dispute that its Fuji LiDAR device includes 28 01980-00104/9210217.1 No. 3:17-cv-00939-WHA WAYMO'S REPLY IN SUPPORT OF ITS MOTION FOR A PRELIMINARY INJUNCTION

1	. (Haslim Decl. Figs. 6A-F.) Like the in Waymo's
2	device – and like the design files for these PCBs that Levandowski stole – the
3	
4	. (Id.; Kintz Reply Decl. ¶¶ 25-28.)
5	Despite using the, Uber
6	argues that it does not use Trade Secrets 2 and 3, based on the narrow distinction that Fuji includes
7	"rather than a "Copp. 12.) But misappropriation does
8	not require an exact one-to-one match between the asserted trade secret and the accused device.
9	SkinMedica, Inc. v. Histogen Inc., 869 F. Supp. 2d 1176, 1197 (S.D. Cal. 2012). The Fuji device
10	simply .
11	This minor modification does not allow Uber to escape liability for misappropriation. See id.
12	("This scattershot attempt to disclaim use of various elements of the claimed trade secrets does not
13	foreclose the possibility that Histogen's process was not substantially derived from the claimed
14	trade secrets, even if it differed in specifics from the process described therein."). The same is true
15	with respect to Uber's argument that
16	. (Opp. 12-13.) Uber's arrangement of
17	is nothing more than a minor modification to Waymo's trade secret design, with the
18	· ·
19	Uber's purported independent development of Fuji's
20	entirely on Haslim's statement that he came up with the Fuji through an "iterative
21	approach." (Opp. 13; Haslim Decl. ¶ 11.) But the only piece of evidence that Haslim cites to
22	show an "iterative approach" is an email he sent to Boehmke on October 28, 2016, where he
23	stated, "
24	(Haslim Decl. Ex. A at 1.) The email does not discuss any "iterative approach," let alone explain
25	how Haslim went from "to the specific"
26	(remarkably similar to Waymo's) in less than two months.
27	Moreover, the record evidence contradicts Uber's argument that Trade Secrets 2 and 3 are
28	

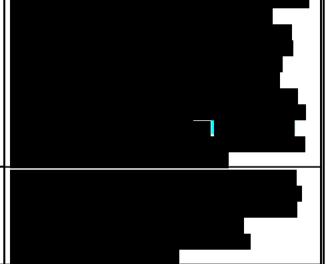

1	"a general approach" dictated by "well known principles of physics." (Opp. 12.) Uber does not
2	cite a single LiDAR device – other than Waymo's and Uber's Fuji – that includes an
3	arrangement of Ex. 84 (Lebby) 37:15-21.) Uber's
4	expert admits that there are many different possibilities for
5	, and many different design considerations could be balanced differently to arrive
6	at different solutions. (Id. 38:13-39:21.) Indeed, although Uber argues that one would be led to
7	Waymo's design simply by "the desire to reduce the size, cost, and complexity of the system"
8	(Opp. 12), Uber's expert admits that designs other than Waymo's (and now Uber's) would result
9	in a smaller and less complex system. (Ex. 84 (Lebby) 47:9-48:14.) Similarly, although Uber's
10	expert suggested that might lead to
11	Waymo's design (Lebby Decl. ¶ 35), that consideration is actually more likely to lead to
12	
13	. In sum, Uber's expert has only confirmed that
14	results from the consideration of a variety of factors, which are often in tension and which can be
15	balanced in a variety of ways based on competing priorities – in other words,
16	design is far from a "well known principle of physics." Here too, an adverse interest of
17	misappropriation is also appropriate in light of Levandowski's pleading the Fifth to every question
18	on Trade Secrets 2 and 3. (Ex. 66 (Levandowski) 142:13-145:23.)
19	D. Trade Secret 14:
20	Uber concedes that in Fuji. (Haslim
21	Decl. ¶ 14; Ex. 65 (Linaval) 59:4-12.) Uber's attorneys argue that Uber does not also
22	, citing one paragraph in Haslim's declaration
23	(¶ 14) to support that position. But Haslim does not disavow
24	; Haslim simply states that Uber uses fiducials to position laser diodes. (<i>Id.</i>) And
25	Exhibit B to Haslim's declaration reveals that
26	Moreover, nowhere does Haslim (or anyone else) address Uber's use of
27	which would only be necessary if
28	which would only be necessary if
17 1	7- No. 3:17 ev 00030 WHA

(Mot. 15; Kintz Reply Decl. ¶ 48.) 1 Uber cites to its expert Dr. Lebby to contend that Trade Secret 14 was in the public 2 3 domain. (Opp. 15.) But Dr. Lebby mischaracterizes the trade secret as and then argues 4 5 that each was known in non-LiDAR and non-optical engineering literature. (Lebby Decl. ¶¶ 52-58.) Dr. Lebby has not pointed to a reference disclosing the use of 6 7 (Ex. 84 (Lebby) 70:5-8); 71:3-72:12 (German patent application nowhere discloses 8 ('109 patent discloses 9); 74:5-15 ('037 patent discloses)).) An adverse interest of misappropriation is also appropriate in light of Levandowski's pleading the Fifth in response to 10 every question on Trade Secret 14. (Ex. 66 (Levandowski) 149:14-154:23.) 11 12 Ε. Uber's Use of Additional Waymo Trade Secrets 13 In addition to the trade secrets called out in Waymo's initial motion, expedited discovery has confirmed that Uber is using at least five other Waymo trade secrets, as more fully described 14 in Kintz's declaration submitted herewith. (Kintz Reply Decl. ¶¶ 55-79.) For example, Waymo's 15 16 Trade Secret 48 is directed to Waymo's unique 17 Waymo's inspection combined with an electrical schematic produced by Uber (Ex. 92), has revealed Uber's 18 19 use of (Kintz Reply Decl. ¶¶ 72-77.) Just like 20 Waymo, Uber's (Id. ¶¶ 74-75.) And Levandowski directed his 21 22 Otto employees to get ' " a supplier of 23 like those used by Waymo. (Ex. 86.) This evidence of misappropriation is consistent with Levandowski's download of a specific presentation describing Trade Secret 48, 24 25 entitled "Google | for Car LiDAR," which Levandowski stole (in addition to the entire contents of Waymo's SVN server) (Droz. ¶ 25 & Ex. H at 7) and with Levandowki's pleading the 26 27 Fifth in response to all questions regarding Trade Secret 48 (Ex. 66 (Levandowski) 103:13-105:4). 28 No. 3:17-cv-00939-WHA

F. Uber Infringes the '922 and '464 Patents

Uber does not challenge the validity of these patents. Uber's defense to patent infringement is limited to an argument that Fuji – and Fuji alone – does not practice the asserted patents because Fuji uses multiple lenses for transmitting and receiving laser pulses. Left out of Uber's Opposition and as explained below, the device infringes at least claim 1 of the '922 patent and claim 1 of the '464 patent. The '922 and '464 patents are directed to a multi-beam single-lens LiDAR system. (Mot. 16-19.) All of the knowledgeable Uber engineers Waymo deposed admit that (Ex. 64 (Pennecot) 36:16-38:8; Ex. 67 (Boehmke) 44:16-45:14, 75:4-12; Ex. 68 (Haslim) 38:22-39:18, 45:22-46:1, 47:9-19, 48:1-8; Ex. 82 (Gruver) 67:15-68:15.) Each of the limitations of claim 1 of the '922 patent are satisfied, as outlined below and confirmed by Waymo's expert (Kintz Reply Decl. ¶¶ 83-84):4

a lens mounted to a housing, wherein the housing is configured to rotate about an axis and has an interior space that includes a transmit block, a receive block, a transmit path, and a receive path, wherein the transmit block has an exit aperture in a wall that comprises a reflective surface, wherein the receive block has an entrance aperture, wherein the transmit path extends from the exit aperture to the lens, and wherein the receive path extends from the lens to the entrance aperture via the reflective surface;

a plurality of light sources in the transmit block, wherein the plurality of light sources are configured to emit a plurality of light beams through the exit aperture in a plurality of different directions, the light beams comprising light having wavelengths in a wavelength range; a plurality of detectors in the receive block, wherein the plurality of detectors are configured to detect light having wavelengths in the wavelength range; and

(Ex. 68 (Haslim) 48:1-15.)

For the same reasons, infringes claim 1 of the '464 patent. The only difference between '464 claim 1 and '922 claim 1 is the former's requirement that "the transmit path at least partially overlaps the receive path in the interior space between the transmit block and the receive block" instead of requiring the transmit path to pass through a hole in a mirror and the receive path be reflected by said mirror. As Haslim testified,

⁵ Boehmke testified (Ex. 67 at 58:21-22) that "Plan C" in Ex. H to his declaration was

wherein the lens is configured to receive the light beams via the transmit path, collimate the light beams for transmission into an environment of the LIDAR device, collect light comprising light from one or more of the collimated light beams reflected by one or more objects in the environment of the LIDAR device, and focus the collected light onto the detectors via the receive path.

Although Uber engineers have clearly admitted that infringes Waymo's patents, Levandowski pleading the Fifth in response to every question on that subject further supports the conclusion. (Ex. 66 (Levandowski) 105:8-108:6.)

II. ADVERSE INFERENCES ARE APPROPRIATE AGAINST UBER

Uber has aggressively resisted discovery of the extent of its intellectual property theft at every turn. Waymo is entitled to an adverse inference that the Uber has and is continuing to use Waymo's trade secrets and patented designs for three reasons:

Fifth Amendment. Levandowski asserted his privilege against self-incrimination in response to every single question posed at his deposition (Ex. 66) other than six foundational questions eliciting, for example, his name and education (id. 8:8-13; 9:16-19; 10:11-17.) Levandowski took the Fifth on all questions on his relationship with Uber prior to his resignation from Waymo (id. 74:13-76:12, 155:19-156:13); Uber's knowledge of and involvement in his theft of Waymo documents (id. at 16:11-18); Uber's use of Waymo's trade secrets (id. 13:15-14:23, 71:15-74:12); and Uber's efforts to conceal Levandowski's misappropriation. (id. 18:14-20:1).

On this record, it is appropriate to draw various adverse inferences that Levandowski's production of documents and testimony on a given issue⁶ would have been unfavorable to Uber. *Baxter v. Palmigiano*, 425 U.S. 308, 318-19 (1976). Adverse inferences are particularly justified here, where the evidence being withheld is central to the underlying dispute and cannot reasonably

⁶ Further while this Court ordered Levandowski to produce documents at his deposition (Ex. 89 (4/12/17 Hr'g) 75:25-76:17), he did not produce any documents until April 19, when his counsel said he mailed documents (Ex. 102) that Waymo still has yet to receive.

be obtained from other sources. *Doe ex rel. Rudy-Glanzer v. Glanzer*, 232 F.3d 1258, 1265 (9th Cir. 2000). And adverse inferences are properly asserted against *Uber* because Levandowski's "self-interest would counsel him to exculpate his employer, if possible," especially with his stock grants on the line (Exs. 108-109). *RAD Services v. Aetna Cas. & Sur.*, 808 F.2d 271, 275 (3d Cir. 1986); *see also Aptix Corp. v. Quickturn Design Sys.*, 98-762, 2000 WL 852813, at *21 (N.D. Cal. Jun. 14, 2000) (Alsup, J.), *vacated in part on other grounds by* 269 F.3d 1369 (Fed. Cir. 2001). Indeed, Uber has repeatedly relied on a purported unity of interest with Levandowski to shield relevant evidence from discovery under a purported common interest privilege and has otherwise now ratified Levandowski's conduct. *Data Gen. Corp. v. Gruman Sys. Support Corp.*, 825 F. Supp. 340, 353 (D. Mass. 1993) (holding adverse inference against former employee's new employer appropriate where new employer "learned that [former employee] brought the tape from [plaintiff], turned a blind-eye to [his] potential continued wrongful use of [confidential information], and probably shared in the rewards of [his] apparent wrongdoing").

Obfuscation, discovery misconduct, and spurious privilege claims. Uber has willfully violated this Court's Orders requiring it to find and return Waymo's confidential information. (Dkt. 135.) Although Uber contends that "none of Waymo's documents crossed over to Uber" (Opp. 8), Uber has no basis for that statement. Uber has not submitted a declaration or other evidence indicating that it has done anything at all to investigate whether Levandowski has Waymo's confidential documents in his possession or whether Levandowski has referenced those materials – on Uber devices, by "working from home" (Ex. 79), or otherwise – to guide the development of LiDAR at Otto/Uber. In other words, Uber has specifically excluded Levandowski, the head of Uber's self-driving car project, from its purported investigation into whether that project has benefited from Waymo's confidential information; indeed, Waymo just learned yesterday that Uber did not search Levandowski's Otto/Uber email for information responsive to any of Waymo's document requests. (E.g., Ex. 112 (RFP 6), 113.) To this day, Uber does not prohibit Levandowski from bringing personal laptops and electronic devices into Uber offices, Uber does not track network and server activity by Levandowski, and Levandowski

(Ex. 66

]; Ex. 88 (picture referred to in preceding testimony); Ex. 68 (Haslim)
93:24-94:24.) Even in the limited time Waymo has had to study Waymo has shown
(supra Part I.F) that it reflects several Waymo trade secrets and infringes Waymo's '922 and '464
patents. (Ex. 82 (Gruver) 26:7-9, 67:12-68:22; Ex. 64 (Pennecot) 36:13-38:8.)

Adverse Inferences Are Appropriate. The following specific adverse inferences are appropriate based on Uber's misconduct: (i) copies of Waymo's files are in Levandowski's possession, (ii) Levandowski has brought copies of Waymo's files to Uber on his personal laptops and electronic devices (which Uber has admittedly never searched), (iii) Levandowski has accessed copies of Waymo's files while "working from home" for Uber, and (iv) Uber has used the items delineated in Waymo's Trade Secret List in its LiDAR development.⁷

III. THE OTHER FACTORS FAVOR INJUNCTIVE RELIEF

A. Waymo Timely Filed Its Complaint and Injunction Request After Learning of Defendants' LiDAR Program in December 2016

Uber argues that Waymo's supposed delay in filing this suit belies the need for a preliminary injunction. (Opp. 21-22.) But there was no such delay. Uber's use of Waymo's trade secret information only started to become clear in December 2016, when Waymo saw an email from one of its LiDAR component vendors, showing what appeared to be an Uber LiDAR circuit board. That indicated that Uber had misappropriated Waymo's trade secrets and infringed Waymo's patents. Later, on February 9, 2017, Waymo learned that Otto told Nevada state regulators that it is no longer using a third-party LiDAR solution, but rather has "developed in house and/or currently deployed" an "[i]n-house custom built 64-laser" LiDAR system. Waymo then proceeded to file a detailed complaint 14 days later, and a preliminary injunction motion 15

_13

⁷ Tourmaline Partners v. Monaco, 3:13-CV-00108, 2016 WL 614361, at *4 (D. Conn. Feb. 16, 2016) ("An adverse inference is an appropriate sanction to address a party's failure to respond to discovery requests."); see also Odnil Music v. Katharsis, CIV S-05-0545, 2007 WL 3308857, at *6 (E.D. Cal. Nov. 6, 2007); Goldman v. Alhadeff, 131 F.R.D. 188, 192 (W.D. Wash. 1990).

days after that, which included a detailed list of its misappropriated trade secrets. Waymo filed its claims against Uber in a timely fashion.

In response, Uber notes that Waymo looked at Levandowski's Waymo-issued laptops and Google Drive activity logs in mid-2016 and was suspicious of certain downloads in October 2016, a time line that Waymo acknowledged up front in its papers (Dkt. 25-4, at 13). But Uber overlooks that Levandowski covered his tracks and fails to explain how Waymo's concerns and suspicions at this time were sufficient to bring a lawsuit alleging specific legal violations by *Uber*. Indeed, Waymo's efforts to investigate show that it acted assiduously and in good faith to determine whether there was any violation before bringing suit. And as this Court found in *Illumina*, it was perfectly timely for Waymo to seek a preliminary injunction after it had concrete evidence of Uber's malfeasance but before Uber could irrevocably distort competition in the self-driving car market. 207 F. Supp. 3d 1081, 1093-94 (N.D. Cal. 2016).

B. Uber's Attempted "Head Start" into the Nascent Self-Driving Car Market Using Waymo's Own Technology Will Cause Irreparable Harm

Courts routinely recognize that misappropriation of trade secrets creates irreparable harm to a competitor. *See V'Guara Inc. v. Dec*, 925 F. Supp. 2d 1120, 1126 (D. Nev. 2013). In fact, numerous recent cases have recognized that a presumption is warranted in trade secret cases. *Language Line Servs., Inc. v. Language Servs. Assocs., Inc.*, 944 F. Supp. 2d 775, 782 (N.D. Cal. 2013); *UIC Gov't Servs., LLC v. Fleitz*, No. 3:15-CV-00212-SLG, 2015 WL 12516774, at *3 (D. Ariz. Nov. 24, 2015). As for the few cases Uber cites finding no irreparable harm in the tradesecrets context (Opp. at 18 n.39), Uber does not discuss any of their facts — and for good reason, as all are wildly inapposite.⁸ And money damages are inadequate where, as here, it would be difficult to quantify the loss of sales. *i4i Ltd. P'ship v. Microsoft Corp.*, 598 F.3d 831, 862 (Fed.

1.4

In one, the irreparable harm reasoning was based on its holding that the trade secrets claim was likely to fail on the merits. *GSI v. United Memories*, C 13-1081 PSG, 2013 WL 12172990, at *9, 11 (N.D. Cal. Aug. 21, 2013). In another, the plaintiff essentially abandoned its trade secrets claim. *Precision Auto. v. Tech. Servs.*, 07-CV-707-AS, 2007 WL 4480739, at *3 (D. Or. Dec. 14, 2007). Another was merely "a debt collection action dressed up in federal trademark infringement clothes." *Kahala v. Kim*, No. CV 13-02933, 2013 WL 12086126, at *3 (C.D. Cal. July 10, 2013).

The last dealt with information about customers (not technology), and the plaintiffs provided no evidence of harm. *Southeast X-Ray v. Spears*, 929 F. Supp. 2d 867, 875-76 (W.D. Ark. 2013).

Cir. 2010). To determine how much of a nascent market Waymo might lose due to Uber's violations would require many assumptions and likely to underestimate monetary damages. Uber argues that Waymo would not be harmed prior to trial because (Opp. 19.) This assumes that Uber continues using Waymo's intellectual property . (Ex. 68 (Haslim) 82:10-14.) That "head start" is exactly the irreparable harm Waymo seeks to prevent. See Lamb-Weston, Inc. v. McCain Foods, Ltd., 941 F.2d 970, 974 (9th Cir. 1991); Netlist Inc. v. Diablo Techs. Inc., No. 13-CV-05962, 2015 WL 153724, at *8 (N.D. Cal. Jan. 12, 2015). Uber's only response to these cases (Opp. 20 & n.43) is that they concern established markets. But a nascent market (as here) makes it even *more* important which competitor can hit the market first and therefore *more* harmful for a competitor to get an improper head start. Moreover, knowledge cannot be un-learned, and the knowledge gained from using Uber's confidential trade secrets would provide Uber with a significant benefit regardless of whether Uber was later barred from further misappropriation of trade secrets or further patent infringement.

IV. THE COURT SHOULD ISSUE A PRELIMINARY INJUNCTION

For the foregoing reasons, Waymo respectfully requests the Court to order that Uber be preliminarily enjoined from: (1) using Levandowski to work on Uber's self-driving car program; (2) using the 14,000 files and other proprietary documents taken from Waymo; (3) using the trade secrets discussed in Waymo's briefing (Trade Secrets 1-4, 7, 14); (4) infringing claim 1 of the '922 patent and claim 1 of the '464 patent; and (5) based on adverse inference, using the additional trade secrets identified in Waymo's list of trade secrets (Dkt. 25-7) pending trial. ¹⁰

⁹ The lone case that Uber cites (Opp. 20) on this point concerned a TRO, so its reliance on the idea that the competing product would not be sold immediately made sense in that case (but not here for the much longer period that would be covered by a preliminary injunction). *Zodiac Pool Sys.*, *Inc. v. Aquastar Pool*, 13-cv-343-GPC, 2013 WL 690616, at *5 (S.D. Cal. Feb. 22, 2013).

¹⁰ Waymo is not seeking a preliminary injunction for secrets in Section H of its Trade Secret List.
